

EMERGENCY PROCEDURES

Fire

When a fire is detected you should do the following:

1. Immediately call 911.
2. Assist consumers in leaving the house via the designated emergency exit or the nearest safe exit.
3. Move away from the house to allow the fire trucks to enter.
4. Remain outside the house until the 'all clear' is given.

Tornado

When there is an applicable tornado warning, or severe weather warning, you should do the following:

1. Assist consumers to the lowest level and innermost rooms of the home, away from glass windows or doors.
2. Assume a protective position by sitting facing close to a solid wall with arms overhead, if possible.
3. Monitor weather reports via television or radio. When the threat of danger passes direct individuals back to their original activities.
4. If an injury occurs provide appropriate first aid and call 911, if warranted.
